- Laminated to be water resistant. Can be used as backsplash paper
- High gloss finish for super smooth surfaces and ideal for covering furniture and as drawer / shelf liners

## 2. GUIDE TO MEASURING YOUR WALLS

---

- Measure the width and height of each wall that needs to be covered with wallpaper separately
- If there are large doors and windows in the wall, you could remove them from the width and height as well and estimate the width / height
- If you'd like to cover the area above or below the doors and windows, it is always safer to consider the window and door dimensions in your measurements to avoid pattern mismatches
- Multiply the width by height to estimate your requirement in square feet; for eg. If the width of your wall is 10 feet and the height is 12 feet, your estimated requirement is 120 or 10x12 sqft. Custom wallpaper dimensions are always not perfect and there usually is a 0.5 inch difference in width of the stated measure and actual measure. It is always safer to consider 10% extra while ordering to deal with pattern mismatch, wastage and alignment issues.

## 3. HOW MUCH WALLPAPER DO I NEED?

### 3.1. WALLPAPER

- Our custom wallpapers are printed in standard widths of 2 or 4 feet and a maximum height of 12 feet.
- To estimate your requirement, if your ceiling height is upto or 12 feet, divide the room width by 2 or 4 to estimate the number of rolls you require; for eg If your room height is 10 feet and the width is 10 feet, then you need 2 rolls of 4ft width x 10ft height plus one roll of 2ft width x 10 ft height OR 5 rolls of 2ft width x 10ft height.
- The height and widths can be opted for in the drop down menus and the quantity in the option below height.
- The instructions in this section need to be read in conjunction with the previous Guide to Measuring Your Walls to place the correct order.
- In case you do require custom sizes in height or width or need to place an order in bulk for commercial or retail requirements, do write to us for special pricing.

### 3.2. WALLPAPER ROLLS

- Each wallpaper roll comes in a standard size of 21 inches wide x 30 feet (approx. 10 metres) long and covers an area of 57 sqft.
- While most of these have designs that need to be applied vertically, some designs can be applied on walls horizontally as well and this can be ascertained from the design itself. In either case, divide the respective dimensions by the width / height of the paper accordingly to estimate your requirement:
  - **Case 1** - Room width 10 feet, height 10 feet, horizontal pattern application : In this case, the height becomes 21 inches and since the width is 10 feet, the paper can be applied in 3 rows of 10 feet wide by 21 inches height and the estimated requirement becomes 120 inches (10ft in inches) divided by 21 or approx. 6 rows 10ft wide. This translates into a requirement of 2 rolls.
  - **Case 2** - Room width 10 feet, height 10 feet, vertical pattern application : In this case, the width becomes 21 inches and since the height is 10 feet, the paper can be applied in 3 columns of 10 feet height by 21 inches wide and the estimated requirement becomes 120 inches (10ft in inches) divided by 21 or approx. 6 columns 10ft tall. This translates into a requirement of 2 rolls.
- A simple rule of thumb is to estimate the total area as per guidelines in the Guide to Measuring Your Walls and dividing by 57 which is the area covered by 1 wallpaper roll.
- There might be very slight differences between lots of wallpaper rolls and to be on the safer side, it is advisable to call for an extra roll to avoid situations of color differences.
